

Major Wondrous Items by Complexity

Project: DND35Prototype

Date: May 25, 2026

Related: major_wondrous_items_implementation_plan.md

OVERVIEW

This document provides a detailed breakdown of all major wondrous items organized by implementation complexity. Each tier represents exponentially increasing development time and technical challenges.

Complexity Rating System:

- ★ = Trivial (< 1 day)
 - ★★ = Simple (2-3 days)
 - ★★★ = Moderate (5-7 days)
 - ★★★★ = Complex (2-3 weeks)
 - ★★★★★ = Artifact-Level (3-4 weeks)
-

TIER 1: SIMPLE IMPLEMENTATIONS (★★)

Estimated Time per Item: 2-3 days

Total Items: 8

Total Time: 2-3 weeks

These items build on existing systems with minimal new code. They primarily involve creating item data, assigning properties, and hooking into established mechanics.

1. Carpet of Flying (4 variants)

Price: 20,000 / 35,000 / 60,000 / 75,000 gp

Complexity: ★★

Why Simple:

- Flying mechanics likely already exist (Wings of Flying, Fly spell)
- Just needs vehicle/passenger capacity tracking
- Different sizes = different data values

Implementation:

```

public class CarpetOfFlying : MagicalVehicle
{
    public enum Size { Small_5x5, Medium_5x10, Large_10x10, XLarge_10x15 }

    public CarpetOfFlying(Size size)
    {
        FlySpeed = 40;
        MovementType = Movement.Fly;

        switch(size)
        {
            case Size.Small_5x5:
                Capacity = 1;
                MaxWeight = 200;
                Price = 20000;
                break;
            // etc.
        }
    }
}

```

Dependencies:

- Flight system (assumed exists)
- Weight/passenger tracking

Time Estimate: 1 day (all 4 variants together)

2. Mantle of Spell Resistance (5 variants)

Price: 90,000 / 121,000 / 157,000 / 198,000 / 250,000 gp

Complexity: ★★

Why Simple:

- SR system likely exists (Robe of Archmagi already implemented with SR 18)
- Just grant different SR values
- Main logic: highest SR wins (no stacking)

Implementation:

```

public class MantleOfSpellResistance : WondrousItem
{
    public int SpellResistanceValue { get; set; }

    public override void OnEquip(Character wearer)
    {
        wearer.AddSpellResistance(SpellResistanceValue);
    }

    public override void OnUnequip(Character wearer)
    {
        wearer.RemoveSpellResistance(SpellResistanceValue);
    }
}

```

Dependencies:

- Spell Resistance calculation system
- Stacking rules (verify highest wins)

Time Estimate: 1 day (including verification of SR stacking)

3. Stone Horse (3 variants)

Price: 10,000 / 14,800 / 28,500 gp

Complexity: ★★

Why Simple:

- Figurines of Wondrous Power likely already implemented (minor items)
- Stone Horse is just another figurine type
- Transform into mount on command

Implementation:

```
public class StoneHorse : FigurineOfWondrousPower
{
    public enum Type { Courser, Destrier, DestrierGreater }

    public StoneHorse(Type type)
    {
        UsesPerWeek = 1;
        Duration = 24 * 60; // 24 hours in rounds

        switch(type)
        {
            case Type.Courser:
                CreatureType = "Light Horse";
                Price = 10000;
                break;
            case Type.Destrier:
                CreatureType = "Heavy Horse";
                Price = 14800;
                break;
            case Type.DestrierGreater:
                CreatureType = "Heavy Horse";
                CanFly = true;
                FlySpeed = 60;
                Price = 28500;
                break;
        }
    }
}
```

Dependencies:

- Figurine transformation system (from minor items)
- Horse creature stats

Time Estimate: 1 day (all 3 types)

4. Periapt of Proof Against Poison

Price: 27,000 gp

Complexity: ★★

Why Simple:

- Just sets poison immunity flag
- Single binary effect

Implementation:

```
public class PeriaptOfProofAgainstPoison : WondrousItem
{
    public override void OnEquip(Character wearer)
    {
        wearer.ImmuneToPoisonAll = true;
    }

    public override void OnUnequip(Character wearer)
    {
        wearer.ImmuneToPoisonAll = false;
    }
}
```

Dependencies:

- Poison immunity system (likely exists for creatures like constructs)

Time Estimate: 0.5 days

5. Scarab, Golembane

Price: 2,500 gp

Complexity: ★★

Why Simple:

- Grant +2 bonus on attacks vs golems
- Allow critical hits vs golems (override immunity)

Implementation:

```
public class ScarabGolembane : WondrousItem
{
    public override void OnEquip(Character wearer)
    {
        wearer.AddConditionalBonus(new ConditionalBonus
        {
            BonusType = BonusType.Luck,
            Value = 2,
            AppliesTo = "Attack",
            Condition = "Target is Golem"
        });

        wearer.CanCriticalHitGolems = true;
    }
}
```

Dependencies:

- Creature type checking (golem detection)
- Critical hit immunity override

Time Estimate: 0.5 days

6. Bottle of Air

Price: 7,250 gp

Complexity: ★★

Why Simple:

- Grants immunity to suffocation/drowning
- Single continuous effect

Implementation:

```
public class BottleOfAir : WondrousItem
{
    public override void OnEquip(Character wearer)
    {
        wearer.ImmuneToSuffocation = true;
        wearer.CanBreatheUnderwater = true;
    }
}
```

Dependencies:

- Environmental hazard system (suffocation/drowning)

Time Estimate: 0.5 days

7. Wings of Flying

Price: 54,000 gp

Complexity: ★★

Why Simple:

- Grant fly speed 60 ft, unlimited duration
- Similar to Carpet of Flying but worn item

Implementation:

```

public class WingsOfFlying : WondrousItem
{
    public override void OnEquip(Character wearer)
    {
        wearer.FlySpeed = 60;
        wearer.FlightManeuverability = Maneuverability.Average;
    }

    public override void OnUnequip(Character wearer)
    {
        wearer.FlySpeed = 0;
    }
}

```

Dependencies:

- Flight system

Time Estimate: 0.5 days

8. Robe of Blending

Price: 8,400 gp

Complexity: ★★

Why Simple:

- +10 competence bonus to Hide checks
- Single skill modifier

Implementation:

```

public class RobeOfBlending : WondrousItem
{
    public override void OnEquip(Character wearer)
    {
        wearer.AddSkillBonus(Skill.Hide, 10, BonusType.Competence);
    }
}

```

Dependencies:

- Skill bonus system

Time Estimate: 0.25 days

TIER 2: MODERATE COMPLEXITY (★★★)

Estimated Time per Item: 5-7 days

Total Items: 18

Total Time: 13-18 weeks

These items require new mechanics but are focused on a single primary ability or small set of related abilities.

9. Amulet of the Planes

Price: 120,000 gp

Complexity: ★★★★★

Why Moderate:

- Requires planar travel system implementation
- At-will plane shift (unlimited uses)
- Will save for unwilling targets

New System Required: Planar Travel

Implementation:

```
public class AmuletOfThePlanes : WondrousItem
{
    public void UsePlaneShift(Character wearer, Plane destination)
    {
        // At-will activation
        PlanarTravelSystem.PlaneShift(wearer, destination, requiresWillSave: false);
    }
}
```

Dependencies:

- Planar travel system
- Plane enum/database
- Will save mechanics

Time Estimate: 5 days (after planar system built)

10. Cubic Gate

Price: 164,000 gp

Complexity: ★★★★★

Why Moderate:

- 6 sides, each attuned to different plane
- Track charges per side (3/week each = 18 total charges)
- Gate spell (allows calling creatures from plane)

Implementation:

```

public class CubicGate : WondrousItem
{
    public Dictionary<int, Plane> SideAttunements; // Side 1-6 -> Plane
    public Dictionary<int, int> SideCharges; // Side 1-6 -> Charges remaining

    public void ActivateSide(int side)
    {
        if (SideCharges[side] > 0)
        {
            Plane destination = SideAttunements[side];
            PlanarTravelSystem.CreateGate(destination, duration:
10); // 1 round/level (CL 10)
            SideCharges[side]--;
        }
    }

    public void RestoreWeeklyCharges()
    {
        for (int i = 1; i <= 6; i++)
        {
            SideCharges[i] = 3;
        }
    }
}

```

Dependencies:

- Planar travel system
- Per-side charge tracking
- Weekly reset mechanics

Time Estimate: 7 days

11. Well of Many Worlds

Price: 82,000 gp

Complexity: ★★★★★

Why Moderate:

- Random plane portal generation
- Two-way portal (unlike one-way plane shift)
- Dangerous interaction with Portable Hole

Implementation:

```

public class WellOfManyWorlds : WondrousItem
{
    public void SpreadOnGround()
    {
        Plane randomPlane = GetRandomPlane();
        Portal portal = PlanarTravelSystem.CreatePortal(randomPlane, isTwoWay: true);

        // Check for Portable Hole within 10 ft
        if (DetectPortableHoleNearby())
        {
            DestroyBothItems();
            CreateAstralGate();
        }
    }

    private Plane GetRandomPlane()
    {
        Plane[] planes = { Plane.Ethereal, Plane.Astral, Plane.Elemental_Air,
                           Plane.Elemental_Earth, Plane.Elemental_Fire, Plane.Elementa
                           l_Water };
        return planes[Random.Range(0, planes.Length)];
    }
}

```

Dependencies:

- Portal creation (different from plane shift)
- Random plane selection
- Item proximity detection
- Item destruction mechanics

Time Estimate: 6 days

12. Mantle of Faith

Price: 76,000 gp

Complexity: ★★★★★

Why Moderate:

- Multiple abilities: +5 saves + 4 spells 1/day
- Charge tracking for 4 different spells

Implementation:

```

public class MantleOfFaith : WondrousItem
{
    public Dictionary<string, int> DailyCharges; // Bless, Detect Evil, Remove Fear, Aid

    public override void OnEquip(Character wearer)
    {
        wearer.AddSaveBonus(5, BonusType.Resistance, SavingThrow.All);

        DailyCharges = new Dictionary<string, int>
        {
            { "Bless", 1 },
            { "DetectEvil", 1 },
            { "RemoveFear", 1 },
            { "Aid", 1 }
        };
    }

    public void CastSpell(string spellName)
    {
        if (DailyCharges[spellName] > 0)
        {
            SpellEffects.Cast(spellName, wearer);
            DailyCharges[spellName]--;
        }
    }
}

```

Dependencies:

- Spell effect system (Bless, Detect Evil, Remove Fear, Aid)
- Daily charge reset

Time Estimate: 5 days

13. Robe of Stars

Price: 58,000 gp

Complexity: ★★★★★

Why Moderate:

- +1 luck bonus to saves (simple)
- Astral travel (requires planar system)
- 6 consumable stars (Magic Missile at 5th level)
- Becomes non-magical when all stars used

Implementation:

```

public class RobeOfStars : WondrousItem
{
    public int StarsRemaining = 6;

    public void DetachStar()
    {
        if (StarsRemaining > 0)
        {
            SpellEffects.MagicMissile(casterLevel: 5, missiles: 3);
            StarsRemaining--;

            if (StarsRemaining == 0)
            {
                BecomeNonMagical();
            }
        }
    }

    public void TravelThroughAstralPlane(Vector3 destination)
    {
        PlanarTravelSystem.AstralTravel(wearer, destination);
    }
}

```

Dependencies:

- Astral Plane travel
- Consumable charges (star removal)
- Magic Missile spell
- Item becomes non-magical mechanic

Time Estimate: 6 days

14. Lyre of Building

Price: 13,000 gp**Complexity:** ★★★★★**Why Moderate:**

- Fabricate spell (CL 13)
- Can create structures/buildings
- Takes 30 minutes to use
- 1/week limitation

Implementation:

```

public class LyreOfBuilding : WondrousItem
{
    public int UsesRemaining = 1; // Resets weekly

    public void PlayLyre(Material material, int cubicFeet)
    {
        if (UsesRemaining > 0)
        {
            // Fabricate: transform raw materials into finished product
            SpellEffects.Fabricate(material, cubicFeet, casterLevel: 13);
            StartCoroutine(DelayedUse(30 * 60)); // 30 minutes
            UsesRemaining--;
        }
    }
}

```

Dependencies:

- Fabricate spell mechanics
- Material type system
- Construction rules
- Time passage (30 minutes)

Time Estimate: 5 days

15-16. Mattock/Maul of the Titans

Price: 23,348 / 25,305 gp

Complexity: ★★★★★

Why Moderate:

- Requires high Strength to wield (19/23)
- Increased damage dice (4d6 / 4d8)
- Special abilities (excavation / sunder)

Implementation:

```

public class MattockOfTitans : Weapon
{
    public int RequiredStrength = 19;

    public override bool CanWield(Character wielder)
    {
        return wielder.Strength >= RequiredStrength;
    }

    public override int RollDamage()
    {
        return DiceRoller.Roll("4d6") + StrengthBonus;
    }

    public void Excavate(Tile target)
    {
        // Remove 10 cubic feet of stone per 10 minutes
        if (target.Material == Material.Stone)
        {
            target.Remove(10); // cubic feet
        }
    }
}

```

Dependencies:

- Strength requirement checks
- Custom damage dice
- Excavation mechanics (Mattock)
- Sunder bonus (Maul)

Time Estimate: 4 days (both weapons together)

17. Cloak of the Bat

Price: 26,000 gp

Complexity: ★★★★★

Why Moderate:

- Multiple abilities: hang, polymorph into bat, fly
- Polymorph requires creature transformation

Implementation:

```

public class CloakOfBat : WondrousItem
{
    public void Hang()
    {
        // Hang from ceiling like bat (rest position)
        wearer.Posture = Posture.Hanging;
    }

    public void PolymorphIntoBat()
    {
        Polymorph.Transform(wearer, CreatureType.Bat, duration: Unlimited);
    }

    public void FlyInDarkness()
    {
        if (IsInDarkOrTwilight())
        {
            wearer.FlySpeed = 60;
        }
    }
}

```

Dependencies:

- Polymorph system
- Bat creature stats
- Light level detection

Time Estimate: 5 days

18. Scarab of Protection

Price: 38,000 gp**Complexity:** ★★★★★**Why Moderate:**

- +4 resistance to all saves
- Absorbs death effects (12 levels)
- Absorbs negative energy (200 hp)
- Charge tracking for two separate pools

Implementation:

```

public class ScarabOfProtection : WondrousItem
{
    public int DeathEffectCharges = 12;
    public int NegativeEnergyCharges = 200;

    public override void OnEquip(Character wearer)
    {
        wearer.AddSaveBonus(4, BonusType.Resistance, SavingThrow.All);
    }

    public bool AbsorbDeathEffect(int spellLevel)
    {
        if (DeathEffectCharges >= spellLevel)
        {
            DeathEffectCharges -= spellLevel;
            return true; // Effect absorbed
        }
        return false;
    }

    public bool AbsorbNegativeEnergy(int damage)
    {
        if (NegativeEnergyCharges >= damage)
        {
            NegativeEnergyCharges -= damage;
            return true;
        }
        return false;
    }
}

```

Dependencies:

- Death effect detection
- Negative energy damage tracking
- Charge depletion

Time Estimate: 6 days

19. Phylactery of Faithfulness

Price: 1,000 gp

Complexity: ★★★★★

Why Moderate:

- Requires divine code/tenets system
- Must evaluate if action violates deity's rules
- AI/logic to determine violations

Implementation:

```

public class PhylacteryOfFaithfulness : WondrousItem
{
    public bool WillViolateDivineTenets(Character wearer, Action proposedAction)
    {
        Deity deity = wearer.Deity;

        // Check action against deity's tenets
        foreach (var tenet in deity.Tenets)
        {
            if (tenet.IsViolatedBy(proposedAction))
            {
                return true;
            }
        }

        return false;
    }
}

```

Dependencies:

- Deity system with defined tenets
- Action classification
- Violation checking logic

Time Estimate: 7 days (requires complex divine code system)

20-21. Candle of Invocation / Incense of Meditation

Price: 8,400 / 4,900 gp

Complexity: ★★★★★

Why Moderate:

- Alignment-specific (Candle)
- Divine caster requirement
- Temporary CL boost for spell preparation (Incense)
- Gate spell (Candle)
- Burn time tracking (consumable)

Time Estimate: 5 days (both items together)

22. Mantle of Great Stealth

Price: 242,000 gp

Complexity: ★★★★★

Why Moderate:

- +10 competence bonus to Hide and Move Silently
- Invisibility at will
- Greater Invisibility 1/day

Implementation:

```

public class MantleOfGreatStealth : WondrousItem
{
    public int GreaterInvisibilityCharges = 1;

    public override void OnEquip(Character wearer)
    {
        wearer.AddSkillBonus(Skill.Hide, 10, BonusType.Competence);
        wearer.AddSkillBonus(Skill.MoveSilently, 10, BonusType.Competence);
    }

    public void UseInvisibility()
    {
        SpellEffects.Invisibility(wearer);
    }

    public void UseGreaterInvisibility()
    {
        if (GreaterInvisibilityCharges > 0)
        {
            SpellEffects.GreaterInvisibility(wearer);
            GreaterInvisibilityCharges--;
        }
    }
}

```

Dependencies:

- Invisibility spell effects
- Daily charge reset

Time Estimate: 4 days**23-26. Elemental Control Items (4 items)****Price:** 100,000 gp each**Complexity:** ★★★★★ each**Why Moderate:**

- Summon Elder Elemental (large creature with complex stats)
- Control existing elementals (Charisma check vs target)
- Once per day limitation

Time Estimate: 7 days for all 4 (shared system)**TIER 3: COMPLEX MULTI-ABILITY (★★★★★)****Estimated Time per Item:** 2-3 weeks**Total Items:** 10**Total Time:** 20-30 weeks

These items have multiple powerful systems working together, requiring significant integration work.

27. Efreeti Bottle

Price: 145,000 gp

Complexity: ★★★★★

Why Complex:

- Summon efreeti with full stats and AI
- Service mechanics (1 hour of service)
- Wish negotiation (efreeti may offer 3 wishes for freedom)
- Can trap outsiders (like Iron Flask but limited)
- Creature trapping system

Implementation Challenges:

- Efreeti AI (obey commands for 1 hour)
- Wish mechanics (rare and powerful)
- Trap outsiders (requires creature type checking)
- Service duration tracking

Dependencies:

- Creature Trapping System
- Efreeti creature stats
- Wish spell implementation
- Service/command AI

Time Estimate: 2 weeks

28. Iron Cobra

Price: 80,000 gp

Complexity: ★★★★★

Why Complex:

- Autonomous construct with AI
- Poison bite (Fort DC 20, 1d3 Con/round for 6 rounds)
- Follows simple commands (guard, attack, follow, stay)
- Permanent guardian (not consumable)

Implementation Challenges:

- Construct AI state machine
- Command parsing
- Guard mode (attack hostiles within range)
- Poison effect with duration

Implementation:

```

public class IronCobra : ConstructGuardian
{
    public enum Command { Guard, Attack, Follow, Stay }
    public Command CurrentCommand;

    public override void Update()
    {
        switch (CurrentCommand)
        {
            case Command.Guard:
                AttackNearestHostile();
                break;
            case Command.Attack:
                AttackDesignatedTarget();
                break;
            case Command.Follow:
                FollowOwner();
                break;
            case Command.Stay:
                // Idle
                break;
        }
    }

    public void PoisonBite(Character target)
    {
        if (AttackRoll() >= target.AC)
        {
            int damage = DiceRoller.Roll("1d6+4");
            target.TakeDamage(damage);

            if (!SavingThrows.MakeFortSave(target, 20))
            {
                target.AddEffect(new PoisonEffect
                {
                    SaveDC = 20,
                    Damage = "1d3 Con",
                    Duration = 6,
                    Frequency = "per round"
                });
            }
        }
    }
}

```

Dependencies:

- Construct AI framework
- Command system
- Poison with Con damage
- Permanent guardian mechanics

Time Estimate: 2 weeks**29-32. Horn of Valhalla (4 types)****Price:** 15,000 / 20,000 / 35,000 / 50,000 gp**Complexity:** ★★★★★ for the system

Why Complex:

- Summon 2d4+X berserkers (temporary allies)
- Berserker stats and AI
- Proficiency requirements (Brass, Bronze, Iron)
- Duration tracking (fight for 1 hour)
- 1/week limitation

Implementation Challenges:

- Summon multiple creatures at once
- Temporary ally AI (follow user, attack enemies)
- Proficiency checking (martial weapon proficiency required)
- Cleanup after duration ends

Dependencies:

- Berserker stat blocks
- Temporary ally system
- Proficiency checking
- Mass summoning

Time Estimate: 2.5 weeks (for all 4 horns)

33. Apparatus of Kwalish

Price: 90,000 gp

Complexity: ★★★★★

Why Complex:

- Vehicle with 10 levers controlling functions
- Each lever has specific effect (forward, back, left, right, up, down, open/close windows, claw attacks, etc.)
- AC 20, 200 HP (can take damage)
- 2 pincer attacks (2d6+6 each)
- Holds 2 Medium creatures

Implementation Challenges:

- Lever control UI (10 buttons)
- Vehicle movement (walk + swim)
- Attack from vehicle
- Vision system (windows open/closed)
- Passenger management
- Damage to vehicle

Implementation:

```

public class ApparatusOfKwalish : MagicalVehicle
{
    public enum Lever
    {
        Forward, Backward, Left, Right,
        Up, Down,
        OpenWindows, CloseWindows,
        ExtendClaws, RetractClaws
    }

    public Dictionary<Lever, bool> LeverStates;

    public void PullLever(Lever lever)
    {
        switch (lever)
        {
            case Lever.Forward:
                MoveForward(30); // 30 ft speed
                break;
            case Lever.ExtendClaws:
                AttackWithClaws();
                break;
            case Lever.OpenWindows:
                WindowsOpen = true;
                // Can see outside but vulnerable
                break;
            // etc.
        }
    }

    private void AttackWithClaws()
    {
        // 2 attacks at +12 melee
        for (int i = 0; i < 2; i++)
        {
            int attackRoll = DiceRoller.Roll("1d20") + 12;
            if (attackRoll >= target.AC)
            {
                int damage = DiceRoller.Roll("2d6+6");
                target.TakeDamage(damage);
            }
        }
    }
}

```

Dependencies:

- Vehicle system (base class)
- Lever control UI
- Underwater movement
- Vehicle HP/AC tracking
- Vehicle attacks

Time Estimate: 3 weeks

34. Mirror of Opposition

Price: 92,000 gp

Complexity: ★★★★★

Why Complex:

- Clone entire character (stats, abilities, spells, items)
- Invert alignment
- Duplicate attacks original
- Duplicate's items are non-magical
- Duration: until defeated or 1d4+10 rounds

Implementation Challenges:

- Deep copy of character data
- Alignment inversion logic
- Duplicate AI (hostile to original)
- Non-magical item copies
- Timed destruction

Implementation:

```

public class MirrorOfOpposition : MagicalMirror
{
    public Character CreateDuplicate(Character original)
    {
        // Deep clone character
        Character duplicate = DeepClone(original);

        // Invert alignment
        duplicate.Alignment = InvertAlignment(original.Alignment);

        // Make items non-magical
        foreach (var item in duplicate.Inventory)
        {
            item.IsMagical = false;
        }

        // Set to attack original
        duplicate.SetTarget(original);
        duplicate.Attitude = Attitude.Hostile;

        // Destruction timer
        int duration = Random.Range(1, 4) + 10;
        StartCoroutine(DestroyAfterRounds(duplicate, duration));

        return duplicate;
    }

    private Alignment InvertAlignment(Alignment original)
    {
        Alignment inverted = new Alignment();

        // Lawful <-> Chaotic
        if (original.LawChaos == LawChaosAxis.Lawful)
            inverted.LawChaos = LawChaosAxis.Chaotic;
        else if (original.LawChaos == LawChaosAxis.Chaotic)
            inverted.LawChaos = LawChaosAxis.Lawful;
        else
            inverted.LawChaos = LawChaosAxis.Neutral;

        // Good <-> Evil
        if (original.GoodEvil == GoodEvilAxis.Good)
            inverted.GoodEvil = GoodEvilAxis.Evil;
        else if (original.GoodEvil == GoodEvilAxis.Evil)
            inverted.GoodEvil = GoodEvilAxis.Good;
        else
            inverted.GoodEvil = GoodEvilAxis.Neutral;

        return inverted;
    }
}

```

Dependencies:

- Character deep cloning
- Alignment system
- Duplicate AI
- Timed entity destruction

Time Estimate: 2.5 weeks

TIER 4: ARTIFACT-LEVEL (★★★★★)

Estimated Time per Item: 3-4 weeks

Total Items: 3

Total Time: 9-12 weeks

These are the most complex items, requiring multiple interacting systems, extensive UI, and careful save/load handling.

35. Iron Flask

Price: 170,000 gp

Complexity: ★★★★★

Why Artifact-Level:

- Trap ANY creature (not just outsiders)
- Store creature indefinitely with complete state preservation
- Service mechanics (creature serves for 1 hour OR is hostile)
- Must work with save/load system
- Capacity: 1 creature (but any power level)

Implementation Challenges:

- Serialize complete creature state
- Handle creatures with active effects, temporary bonuses, etc.
- Service AI (obey commands for 1 hour)
- Hostile release (immediate combat)
- Interaction with other trapping items (only 1 creature)

Implementation:

```

public class IronFlask : WondrousItem
{
    public TrappedCreature Creature;

    public bool TrapCreature(Character target)
    {
        if (Creature != null)
            return false; // Already occupied

        // Will save DC 19
        if (SavingThrows.MakeWillSave(target, 19))
            return false; // Resisted

        // Trap creature
        Creature = new TrappedCreature
        {
            Name = target.Name,
            SerializedData = SerializeCharacter(target),
            TrapTime = DateTime.Now
        };

        // Remove from game world
        RemoveFromCombat(target);

        return true;
    }

    public Character ReleaseCreature(bool friendly)
    {
        if (Creature == null)
            return null;

        // Restore creature
        Character released = DeserializeCharacter(Creature.SerializedData);

        if (friendly)
        {
            // Serve for 1 hour
            released.Attitude = Attitude.Friendly;
            released.Owner = user;
            released.ServiceDuration = 600; // 1 hour = 600 rounds
        }
        else
        {
            // Hostile
            released.Attitude = Attitude.Hostile;
            released.Target = user;
        }

        // Clear flask
        Creature = null;

        return released;
    }
}

```

Dependencies:

- **Creature Trapping System** (must be built first)
- Character serialization/deserialization
- Service AI with command following

- Save/load persistence
- Will save mechanics

Time Estimate: 3.5 weeks

36. Mirror of Life Trapping

Price: 200,000 gp

Complexity: ★★★★★

Why Artifact-Level:

- Trap up to 15 creatures (massive capacity)
- **UI required** to view all trapped creatures
- Speak command word + name to view specific creature
- Release individually or all at once (mass release)
- Automatic trapping (triggers when viewed)
- 50 ft range
- Save/load must preserve all 15 creatures

Implementation Challenges:

- UI panel showing list of trapped creatures (names, portraits, HP)
- Mass release mechanics
- View individual creature details
- 15 separate storage slots
- Breaking mirror releases all (destruction mechanic)

Implementation:

```

public class MirrorOfLifeTrapping : MagicalMirror
{
    public List<TrappedCreature> TrappedCreatures = new List<TrappedCreature>();
    public int MaxCapacity = 15;

    public void OnViewed(Character viewer)
    {
        if (TrappedCreatures.Count >= MaxCapacity)
            return; // Full

        // Automatic trap (Will DC 23)
        if (!SavingThrows.MakeWillSave(viewer, 23))
        {
            TrapCreature(viewer);
        }
    }

    private void TrapCreature(Character target)
    {
        TrappedCreature trapped = new TrappedCreature
        {
            Name = target.Name,
            Portrait = target.Portrait,
            CurrentHP = target.CurrentHP,
            MaxHP = target.MaxHP,
            SerializedData = SerializeCharacter(target)
        };

        TrappedCreatures.Add(trapped);
        RemoveFromCombat(target);
    }

    public void ShowTrappedCreaturesUI()
    {
        // Display UI panel
        TrappedCreaturesPanel panel = UIManager.ShowPanel<TrappedCreaturesPanel>();
        panel.PopulateList(TrappedCreatures);
    }

    public void ViewCreature(string name)
    {
        TrappedCreature creature = TrappedCreatures.Find(c => c.Name == name);
        if (creature != null)
        {
            // Show detailed view in mirror
            MirrorDisplay.ShowCreature(creature);
        }
    }

    public void ReleaseCreature(int index)
    {
        if (index < 0 || index >= TrappedCreatures.Count)
            return;

        Character released = DeserializeCharacter(TrappedCreatures[index].SerializedData);
        released.Attitude = Attitude.Hostile; // Always hostile

        TrappedCreatures.RemoveAt(index);
        AddToCurrentScene(released);
    }
}

```

```

public void ReleaseAll()
{
    for (int i = TrappedCreatures.Count - 1; i >= 0; i--)
    {
        ReleaseCreature(i);
    }
}

public void OnDestroyed()
{
    ReleaseAll(); // Breaking mirror releases all
}
}

```

UI Components:

```

public class TrappedCreaturesPanel : UIPanel
{
    public List<TrappedCreatureRow> Rows;

    public void PopulateList(List<TrappedCreature> creatures)
    {
        foreach (var creature in creatures)
        {
            TrappedCreatureRow row = Instantiate(rowPrefab);
            row.SetData(creature.Name, creature.Portrait, $"{creature.CurrentHP}/
{creature.MaxHP}");
            row.OnReleaseClicked += () => mir-
ror.ReleaseCreature(creatures.IndexOf(creature));
            Rows.Add(row);
        }
    }
}

```

Dependencies:

- **Creature Trapping System**
- **UI Framework** for trapped creatures panel
- Mass release mechanics
- Mirror destruction triggers release
- Command word recognition

Time Estimate: 4 weeks (most complex item)

37. Mirror of Mental Prowess

Price: 175,000 gp

Complexity: ★★★★★

Why Artifact-Level:

- 5 different powerful abilities
- +2 enhancement to Int, Wis, Cha (temporary, 8 hours, 1/week)
- Scrying (as spell, DC 19)
- Detect Thoughts (DC 15)
- Suggestion (DC 16)
- Telepathy (120 ft range)

Implementation Challenges:

- Multiple spell-like abilities with different DCs
- Temporary ability score enhancement (8 hours)
- Scrying requires vision system
- Telepathy requires communication channel
- Usage tracking (ability boost 1/week)

Implementation:

```

public class MirrorOfMentalProwess : MagicalMirror
{
    public bool AbilityBoostUsedThisWeek = false;

    public void GrantAbilityBoost(Character viewer)
    {
        if (!AbilityBoostUsedThisWeek)
        {
            viewer.AddTemporaryBonus(Ability.Intelligence, 2, duration: 480); // 8
hours = 480 rounds
            viewer.AddTemporaryBonus(Ability.Wisdom, 2, duration: 480);
            viewer.AddTemporaryBonus(Ability.Charisma, 2, duration: 480);

            AbilityBoostUsedThisWeek = true;
        }
    }

    public void Scry(Character target)
    {
        SpellEffects.Scrying(target, saveDC: 19, casterLevel: 17);
    }

    public void DetectThoughts(Character target)
    {
        SpellEffects.DetectThoughts(target, saveDC: 15);
    }

    public void Suggestion(Character target, string command)
    {
        SpellEffects.Suggestion(target, command, saveDC: 16);
    }

    public void UseTelepathy(Character target)
    {
        if (Distance(owner, target) <= 120)
        {
            TelepathyChannel.Establish(owner, target);
        }
    }
}

```

Dependencies:

- Scrying spell implementation
- Detect Thoughts spell
- Suggestion spell
- Telepathy communication system
- Temporary ability score enhancements
- Weekly usage reset

Time Estimate: 3.5 weeks

COMPLEXITY SUMMARY TABLE

Tier	Complexity	Items	Total Time	Priority
1	★★	8	2-3 weeks	HIGH
2	★★★	18	13-18 weeks	MEDIUM-HIGH
3	★★★★	10	20-30 weeks	MEDIUM
4	★★★★★	3	9-12 weeks	LOW (Artifact)
TOTAL		39	44-63 weeks	

Realistic Estimate (with parallelization): 16-20 weeks

IMPLEMENTATION ORDER BY COMPLEXITY

Phase 1: Quick Wins (Tier 1)

Build momentum with simple items that leverage existing systems.

Items: Carpets, Mantles of SR, Stone Horse, Periapt, Scarab, Bottle of Air, Wings, Robe of Blending

Time: 2-3 weeks

Phase 2: Core Systems + Tier 2

Build planar travel, then implement dependent items.

Items: Amulet of Planes, Cubic Gate, Well of Many Worlds, Mantle of Faith, Robe of Stars, Lyre, Titan Weapons, Cloaks, Scarab of Protection, Divine items, Elemental Control

Time: 13-18 weeks

Phase 3: Complex Multi-System (Tier 3)

Tackle items requiring significant integration.

Items: Efreeti Bottle, Iron Cobra, Horn of Valhalla, Apparatus of Kwalish, Mirror of Opposition

Time: 11-15 weeks

Phase 4: Artifacts (Tier 4)

End-game legendary items.

Items: Iron Flask, Mirror of Life Trapping, Mirror of Mental Prowess

Time: 10-12 weeks

KEY TAKEAWAYS

1. **Start with Tier 1** to build momentum and test systems
 2. **Build Planar Travel early** (unlocks 5 items)
 3. **Build Creature Trapping mid-way** (unlocks 3 artifact items)
 4. **Leave artifacts for last** (most complex, highest risk)
 5. **Parallelization possible** for independent items within same tier
 6. **System reuse is key** - building CreatureTrapSystem once enables 3 items
